

# SureShot II™

VECTOR PRECISION  
AUTOMATIC UPLINK  
ANTENNA POSITIONING

## ***The Most Accurate Uplink Controller Made!***

*Resolution:  $\pm .3^\circ$  vertically and horizontally*

*Acquisition Pattern: One pass, automatic fine-tuning*

*Acquisition Time: Limited only by the speed of the antenna*

*Not subject to magnetic fluctuation!*

- Fast, fully automatic antenna positioning
- Extremely easy to use; three-key satellite acquisition
- Stores coordinates for all satellites in hemisphere
  - Displays (in alpha or orbit order) those  $\pm 70^\circ$  of location
- *Leveling not required*; automatically compensates for out-of-level rotation
- Saves polarity offsets and recomputes each based on current location
- Automatically stores last satellite selected for fast reacquisition
- GPS-accurate time source
- Automatically unstows and stows antenna
- Two rack unit controller, includes interface and power supply
